Lot Size

Your robot will default to using a safe lot size it calculates automatically based on your equity. You can override this by setting the "lot_size_method" to "Manual Input". Using Manual Input, the robot will use the lot size you specify in the "lot_manual_size" input field.

A micro lot is 1,000 units or $0.10 per pip on USD based pairs.

Input value	Lot Size	Price per pip	Units	Increments
0.01	Micro	$0.10 USD	1,000	0.02, 0.03, etc.
0.10	Mini	$1.00 USD	10,000	0.20, 0.30, etc.
1.00	Standard	$10.00 USD	100,000	2.00, 3.00, etc.

Lot Size VS. Account Balance

The minimum recommended account balance for trading micro lots is $100 (with 1 pair). You will need more than that if you plan to trade multiple pairs or large r lots. You should always trade within your limits and never set a lot size that is too large for your account.

ECN Brokers

Brokers like IBFX are called ECN brokers. ECN brokers require trades to be opened a certain way. If you are using an ECN broker you will need to set "using_ecn_broker" to true on your robot. If you're not using an ecn broker setting this value to true will still work.

General Input Settings

There are several general settings that control how your robot trades. The default values are what we recommend for most cases. However, you can customize them to create an entirely unique trading robot. Here's a breakdown of each setting for your reference.

Lot Size Settings

Field name	Description
lot_size_method	Specifies how the robot should determine lot size when sending orders Manual Input: EA uses the lot size specified in the "lot_manual_size" input setting Auto Calculate: EA calculates optimal lot size based on account's equity
lot_manual_size	*If using the "Manual Input" lot size method:* Specify a manual lot size (0.01 - 0.09 = micro, 0.1 - 0.9 = mini, 1.0 - 9.0 = standard)
trade_size_percentage	*If using 'Auto Calculate' lot size method:* Enter the percent of equity to risk when calculating lot size

Pair Settings

require_fresh_bar	Forces the EA to wait for a new bar on terminal launch

true	On terminal launch, EA waits for a new candle to appear before looking for signals
false	Disabled, starts searching right away after launch

max_spread	The maximum acceptable spread (in pips) before halting new trades. Enter 0 for no limit

Account Settings

Field name	Description
using_ecn_broker	When using an ECN Broker, make sure this is set to true. See the "ECN Brokers" section above for more info
use_margin_checks	
minimum_margin_percent	*If margin checks are enabled:* Enter the minimum margin ratio required to safely open new trades

true	Enables money management to prevent margin calls
false	Money management disabled

Stop Loss Settings

Field name	Description
sl_method	Specifies how to determine stop loss for orders

No Stop Loss	Stop loss not used
Manual Stop Loss	Use manually specified stop loss amount
ATR Stop Loss	Calculates stop loss size using ATR levels
Previous Candle Stop Loss	Set stop loss to a previous candle's high / low
Indicator SL Levels	Use indicator provided levels for stop loss (BETA). Does not work for all EAs

Telegram Conact : @realprofitbo
Email : realprofitbo@gmail.com

manual_sl_pips	*If using 'Manual Stop Loss' method:* Enter a stop loss amount (in pips) to be used for orders
atr_sl_period	*If using 'ATR Stop Loss' method:* Enter the period to use for ATR calculations
candle_sl_previous_bars	*If using 'Previous Candle Stop Loss' method:* Enter the amount of previous bars to search for a candle SL via high / low
hide_sl	If enabled all stop losses will be held internally and orders will show an empty stop loss. The EA will close out orders when the internal stop loss is hit (EA must be running). Hiding SL prevents your broker from doing stop loss hunts true – Stop loss is managed internally false – Stop loss is set normally using the order
sl_multiplier	All calculated stop losses (except Protective Stops) will be multiplied by this number regardless of method used. You can quickly increase or decrease all calculated stop losses by adjusting this multiplier. Enter 1 for no adjustment
sl_buffer_pips	Additional amount (in pips) to pad calculated stop losses. Useful if your SLs are being rejected by your broker for being too close to market price

ATR Take Profit	Calculates take profit size using ATR levels
Percent of SL	Sets the TP to a percent of the order's stop loss
Indicator TP Levels	Use indicator provided levels for take profit (BETA)

manual_tp_pips

If using 'Manual Take Profit method:
Enter a take profit amount (in pips) to be used for orders

atr_tp_period

If using 'ATR Take Profit' method:
Enter the period to use for ATR calculations

tp_percent

If using 'Percent of SL' method:
Enter a percent of the order's SL to use as take profit. For this to work, you need to be using a 'Stop Loss Method' above. Ex: '50' for half of SL, '100' for exact match, '200' for double the SL

hide_tp

If enabled all take profits will be held internally and orders will show an empty take profit. The EA will close out orders when the internal take profit is hit (EA must be running)

true	Take profit is managed internally
false	Take profit is set normally using the order

tp_multiplier

All calculated take profits will be multiplied by this number regardless of method used. You can quickly increase or decrease all calculated take profits by adjusting this multiplier. Enter 1 for no adjustment

tp_buffer_pips

Additional amount (in pips) to pad calculated take profits. Useful if your TPs are being rejected by your broker for being too close to market price

Odin Specific Input Settings

The following input settings directly affect Odin's appearance and trading methods.

Field name	Description
odin_method	Choose how to use Odin
	Inactive — Odin indicator completely disabled
	Low Risk — Extra criteria before deeming a signal valid (less trades, more accuracy)
	Confirmation Only — Confirms direction only for other indicators (DANGEROUS)
odin_signal_reverse	Reverse signals from Odin method?
	true — Reverses signal order
	false — Normal signal order
odin_bar	Choose what bar to use for signal generation
	Current Bar — Uses the current bar's values (less signal lag)
	Previous Bar — Uses the most recent closed bar's values (more confirmation)
odin_signal_exit	Exit orders when opposing signals appear?
	true — Exits current order on opposing signal
	false — Manages current order, ignores signal

Quick Loading Custom Settings

Customized robot input values will be lost when you close the chart. You can get around this by saving a new template or using presets to quickly load your custom input values.

Templates

Start by loading your robot on the chart as normal with its original template (if applicable). Customize any input values you might need. When you're ready, right click in the chart and go Template > Save Template.

Specify a file name and hit save. Now when you start MT4 load that template onto your charts. All of the values you originally specified will be loaded along with the expert.

Presets

Another way to quickly load your custom input values is to save them to a preset file. Preset files can be loaded when attaching a robot to a chart.

Start by customizing your robot's input values. When everything looks good, hit the "Save" button. Save the preset file to your computer where you can easily find it.

Using Odin

Currency Pairs

Odin is configured to run on any currency pair. It will adapt its own settings for the chart's pair. We recommend running Odin on pairs with good spreads and low volatility. Spreads will vary from broker to broker, but some good choices are EURUSD, EURAUD, AUDUSD, USDCAD, NZDJPY, NZDUSD, etc.

Broker

Any broker that supports MT4 and Expert Advisors will work. However, it is important to remember that not all brokers are equal. We highly recommend demoing two or more brokers to see which one has the best performance. A reliable broker is crucial to your software's success. We often see users have completely different performance from broker to broker.

Timeframes

Odin works best on middle to low timeframes. M15, M30, and H1 are great choices. M15 will have more signals but also more fake-outs. Keep in mind that Odin will use the value you've set for the "base_tf" input variable. Setting that to "Chart TF" will force Odin to use the chart's current timeframe.

Setup

Odin is set to open and close trades by itself. In order to work properly Odin needs to be left on the entire time the markets are open (24 hours, 5 days a week). Make sure that your computer stays on with your MT4 platform open and connected.

VPS

Most full time traders run their forex robots on a VPS. A VPS is a virtual computer in the cloud. You can log into your VPS remotely and use it like a normal PC. Most forex VPS services come with MT4 pre-installed. This enables you to have MT4 running all the time without leaving your personal PC on for five days straight. Google "forex vps" for more information.

Software Support

Don't go it alone! We are always here for support with your software. That includes installation issues, troubleshooting problems, broker issues, performance tweaks, and general questions. *We highly encourage each and every customer* to contact us if they have any problems.

Online Troubleshooter

If you're having a problem operating your software or you're receiving an error please use our online troubleshooter first. It will help you quickly solve some of the most common problems you may have.

Contacting Us

We provide support through a web based ticketing system that includes email functionality. It is very easy to contact us and receive replies. Please use our website support center if you need support.

We want each and every customer to be profitable and it is our personal mission to help your software exceed to its absolute best. If you're having any issues please contact us!

Support Timeframe / Guidelines

We try to respond to each support request as quickly as possible. However due to the popularity of our software please allow up to three business days for a reply (excluding US holidays and weekends).

Rest assured that your ticket will be handled in the order it was received. Please do not submit more than one ticket per issue. Please also try to submit the ticket using the same email address you used to purchase your software. Do not submit tickets using more than one email address.
